

Dear developers,

Some new features will be added soon to JIO!

- Promises
- Blobs
- Response Headers
- ...

And will provide a lot of useful tools to make your storage creation easier than before.

- ajax + Promise (with blobs by default)
- blob manipulation + Promises
- replace md5 hash by sha256
- ...

It will also provide a better way to build your JIO library thanks to Grunt.

All these powerful tools will be detailed in the future documentation. For more information, you can see the ~~new~~newdesign branch in the [JIO reporsitory](#). (Example [here](#))

Enjoy!

Thanks,
Tristan
