Hello everyone,

I am glad to tell you that JIO version 2.0.0 is released!

New features:

- md5 replaced by sha256
- Promises mechanism (using a custom version of RSVP)
- Command inactivity timeout
- Command progress notifications
- More useful informations in responses
- GetAttachment returns a Blob with its mime type
- JIO storage backend implementation changed to increase command control ease
- Useful utilities in jIO.util (promised ajax, blob manipulation, hash, ...)
- ...

Only LocalStorage connector and DavStorage connector are up to date so far, all other backends will be updated as soon as possible.

See full documentation here.

Thanks,
Tristan Cavelier
